

What's happened @ CMO

Book drive brings in over 1,800 books for schools

When we partnered with Carmeuse Americas to collect English-language books for schools in Ghana and Zambia, we set ourselves a modest goal: 100 books.

As it turns out, we greatly underestimated our colleagues.

Our friends in the U.S. donated **1,812 books** to support this initiative!

This incredible response is a powerful reminder that even in a world that can often feel uncertain, kindness and generosity are still very much alive.

Thank you to Denise Hutchison and Rachel Stewart for running this project.

Welcoming new talent to CLP

In Ghana, the 2025 cohort of National Service Personnel has successfully completed their mandatory service.

Several of these talented interns applied to join the Carmeuse Lime Products (CLP) graduate trainee programme –and we're proud to have welcomed four of them into our team: William Quansah – Stores Department, Rebecca Fynn – Laboratory, Jawars Iddrisu – IT, and Caleb Nkatsiah – Production.

CLP has a proud tradition of nurturing young talent, with many former interns rising through the ranks to take on key roles within the CMO group – including Faisal, now the General Manager, and Mary, who plays a vital role in HR.

Breast cancer awareness event with Carmeuse Tunisia

On 22 October 2025, Carmeuse Tunisia hosted a Breast Cancer Awareness event at Chenchou Infirmary in partnership with the Gabes Regional Health Administration and El Hamma Regional Hospital. The initiative was part of the Pink October campaign, held under the theme: **"Together We Protect Our Lives."**

The event focused on practical ways to improve breast cancer awareness, encourage early detection, and provide support to those affected.

Borehole maintenance in Zambia restores vital water supply

In Zambia, a critical maintenance intervention has helped restore access to clean water for the Chimbalanga community. The community, made up of 15 households, relies on two hand pumps for their daily water needs. When one of the pumps broke down, it significantly impacted access to this essential resource.

Thanks to the efforts of our local team, that hand pump has now been successfully repaired, ensuring the community once again has reliable access to water.
